Mobile Devices and Mobile Email

Company phones and tablets, email on personal devices, device management enrolment

Default priority: P3 Medium
(P2 if the device is business critical)

Target response / resolution: Respond in 15 min / resolve in 4 business hours

Handled by: Tier 1 / Tier 2

Scope

Use this instruction for company-issued or approved personal mobile devices, including email setup, enrolment, app issues, and sync problems.

Related instructions: WI-10 Security Incidents, WI-01 Password Reset, WI-05 Email and Calendar

Common symptoms

- Work email, calendar, or contacts not syncing on the phone
- Cannot enrol the device in device management
- Company app missing or failing to open
- New phone setup, or device is non-compliant and blocked

Information to collect

- Device make, model, and operating system version
- Company-issued or personal device
- Error message or screenshot
- Whether the problem began after a phone update or a password change

Resolution steps

- 1 Check eligibility.** Confirm the device is on the supported list and the user has approval for mobile access. Personal devices must accept the mobile security policy.
- 2 Check basic settings.** Confirm mobile data or Wi-Fi works, the operating system is up to date, and the device passcode meets policy.
- 3 Check compliance.** Open the device management console. A device that is non-compliant (jailbroken, out of date, no passcode) will be blocked from corporate data until it is fixed.
- 4 Re-enrol or re-add the account.** Remove the work account, restart the device, and add it again through the company portal and authenticator app. Update the saved password after any change.
- 5 Fix sync issues.** Check that mail, calendar, and contacts sync is on and not paused by battery saver. Clear the app cache if needed.
- 6 Restore apps.** Install company apps from the company portal. Confirm the app permissions and that the user is signed in with the correct account.
- 7 Confirm with the user.** Have the user send a test email and open a company app. Remind them to report loss or theft right away (see WI-10).

Escalate when

- Device is lost or stolen (see WI-10)
- Enrolment service errors affecting many users
- Request to exempt a device from policy

Resolution and closure

- Update the mobile asset record, including the phone number and enrolment status
- Close after the user confirms mail and apps are working

Quick troubleshooting reference

Symptom	Likely cause	What to do
Mail not syncing on the phone	Password changed, or sync paused	Update the password, check sync settings, and re-add the account.
Enrolment fails	Device not supported, or missing app	Check the supported list, update the OS, and reinstall the company portal.
Phone marked non-compliant	No passcode or out of date OS	Show the user what to fix, then refresh compliance.
Company app will not open	Licence, sign-in, or update needed	Sign in again, update the app, and reinstall if needed.
New phone setup	Device replacement	Remove the old device, enrol the new one, and move MFA to the new phone.

Suggested wording for the user

Open	"What make and model of phone is it, and is it a company or personal device?"
During	"I am checking whether your phone meets our security settings. If it does not, I will show you what to change."
Close	"Your phone is set up. Please send a test email and open the company app so we can be sure."

Good practice

Do

- Check the device is supported
- Explain the mobile policy for personal devices
- Update MFA when a phone is replaced
- Record the enrolment

Do not

- Do not bypass compliance checks
- Do not enrol jailbroken or rooted devices
- Do not forget to wipe company data from returned devices
- Do not store personal data when assisting

Worked example

A user gets a new phone and cannot sign in to the authenticator app.

Ticket note field	Entry
Issue reported	New phone, old phone broken, cannot approve MFA prompts.
Checks performed	Identity verified. No backup of the authenticator.
Cause	MFA method tied to the broken phone.
Action taken	Removed the old method, issued a temporary access pass, and guided re-registration.
Result	User registered the new phone. Closed.

Analyst checklist

- | | |
|---|--|
| ☐ Check eligibility | ☐ Restore apps |
| ☐ Check basic settings | ☐ Confirm with the user |
| ☐ Check compliance | ☐ Ticket note completed using the standard template |
| ☐ Re-enrol or re-add the account | ☐ User confirmed the issue is resolved |
| ☐ Fix sync issues | |

Preventing repeat tickets

- Encourage backing up authenticator apps
- Publish the supported device list
- Automate compliance reports
- Remind users to report loss immediately
